

Kestrel design system

One set of tokens for Kestrel Dispatch (web), Kestrel Driver (iOS and Android) and the shipper portal. Deep slate carries the interface; kestrel amber is reserved for the one action that matters on a screen and for anything the AI assistant proposes. Everything below ships as CSS variables, a Tailwind preset and a Flutter theme from the same JSON.

COLOUR TOKENS

slate for surfaces and text, amber for emphasis, four status hues

ANATOMY

- Header: load ID in mono, badges right-aligned; the Assistant badge always comes before the status badge.
- Route: origin and destination in H3 weight, distance and stop count between them, times in mono caption.
- Footer: a plain-language reason the plan is good, then ghost + primary. Never two primaries.

RULES

- Card width 420px on the board, full width in the Driver app list, 320px in the shipper portal.
- Delayed loads get a 3px status-late left border in addition to the badge.

REFERENCE · A TECHSY DESIGN SYSTEM IN A WORKING PRODUCT

Tokens and components only prove themselves on real screens. Two screens built on the design system of another Techsy project:
